Orsay, the 28th of April 2021

Dear associate Marissa Tremblay and Greg Balco,

Thanks for the final comments and the editorial handling of this technical note.

In the final version, we made all the asked corrections, and gave the precision in the abstract but also added accuracy. Effectively, we are using Durango apatite to access the mass spectrometer sensitivity but also detect changes in instrument sensitivity and potential analytical issues. We have also adapted the text regarding the ccSTP unit and added the equivalent values in unites of moles.

Sincerely
Cécile Gautheron, on behalf of the co-authors
