Dear Drs. Seong and Balco,

We appreciate your time and effort looking over our revised manuscript. We incorporated all suggested edits:

Line 44 – 45: we added the citation for Clark et al. (2009)

Lines 166 – 169: corrected superscripts

Lines 180 – 181: rephrased to '^{36}Cl exposure ages were calculated using an online exposure age calculator (http://stoneage.ice-d.org/math/Cl36/v3/v3_Cl36_age_in.html) and Lm scaling (Lal, 1991).'

Line 382: fixed superscript

Line 414: added 'ka' – these are our exposure age data

Line 433: defined 'IRD'

Table 2: rephrased to 'Exposure ages are presented at 1 σ internal uncertainty; external uncertainty shown in parentheses. Ages were calculated with an online exposure age calculator (http://stoneage.ice-d.org/math/Cl36/v3/v3_Cl36_age_in.html) and Lm scaling (Lal, 1991) assuming no surface erosion and steady state nucleogenic ^{36}Cl production.'

Thank you.

Best,

Caleb Walcott
